

UPCOMING EVENTS

7.5.2021:
UNIGIS Latin America: Admission deadline - UNIGIS professional

21.5.2021:
UNIGIS Latin America: Admission deadline - UNIGIS MSc+

30.5.-2.6.2021:
GIS in Central Asia Conferences –GISCA 2021

1.6.2021:
Info webinar for prospective students

5.-9.7.2021:
GI_Forum & International Symposium on Digital Earth - ISDE12 (virtual conferences)

1.9.2021:
Application deadline for UNIGIS programs in autumn

UNIGIS Zagreb starts with first cohort

UNIGIS Zagreb would like to welcome its first students! Three students from Croatia and Slovenia are starting the UNIGIS MSc program this spring. Dr. Ivan Tomljenovic and his team has set up this new UNIGIS study centre at Oikon, Croatia: "Everything is prepared and our team is very excited to get to know the new students. We are looking forward to share our knowledge with them."

Anita Graser - a "Rising Star"

The Geospatial World platform has identified Anita Graser as one of the 50 Rising Stars in 2021. This award highlights the outstanding accomplishments of young individuals, who are proactive and passionate about the value of geospatial technology to the economy and society. Anita Graser is lecturer of the UNIGIS module "Automated GIS Workflows with QGIS & Python". Congratulations!

Geospatial World Prime

Online media are a key tool for staying abreast with worldwide news, recently "GW Prime" has been launched as a premium service. UNIGIS is offering access through an institutional subscription covering our entire community (students, alumni, instructors). Join the UNIGIS Alumni & Students Worldwide network on LinkedIn for further details.

ISDE12

GI_Week 2021 registration opens in April

GI_Week is the umbrella term for three conferences, taking place this year in July, organized by the Department of Geoinformatics - Z_GIS at the University of Salzburg. While GI_Forum will be hosted as an online conference, AGIT & the conference of the International Society for Digital Earth (ISDE 2021) are currently planned in hybrid mode. Take this unique opportunity to join this annual highlight from anywhere around the globe!

Christian Doppler for MSF

The technical possibilities are developing rapidly: new satellites are delivering higher resolution and more up-to-date images; machine learning and new methods are finding their way into remote sensing. The new Christian-Doppler Laboratory GEOHUM under the lead of UNIGIS supervisor Stefan Lang investigates how these opportunities can be used for MSF (Médecins sans Frontières) so that they can make their humanitarian aid better and more effective. If you are interested in participating for example as part of your UNIGIS Master's thesis, feel free to contact Stefan Lang or Lorenz Wendt (lecturer of the UNIGIS module "Remote Sensing").
