May 12th: Optional Modules Day

Take a look at our exciting range of optional modules! In a free webinar, our UNIGIS lecturers will present their modules. Students, alumni and all who are interested are cordially invited to the jam-packed program from 4:00 p.m. to 7:30 p.m.

Lean back and be inspired of all the varied offers and possibilities!

Anita Graser: award-winning!

"The best dissertation was Dr. Anita Graser from the Paris-Lodron University Salzburg for the topic: Exploratory Analysis of Massive Movement Data", this was the conclusion of the renowned GIS network "Runder Tisch GIS e.V." on March 28th 2022.

Congratulations from the UNIGIS-Team!

módulos

- +SIG y Medio Ambiente (GIS for Environmental Sciences)
- +SIG en Salud Pública (GIS for Public Health)
- +SIG en Servicios Comunes (GIS for Public Services)
- +SIG y Agricultura (GIS for Agriculture)
- +SIG en Desarrollo Comunal/Territorial (GIS for Urban, Regional and Rural Planning)
- +SIG, Riesgos y Desastres (GIS for Risk and Disaster Management)

UNIGIS América Latina

módulos opcionales español

In the last few years, the offer of optional modules at UNIGIS America Latina expanded significantly. A labor market analysis revealed interest on various GI-fields and pushed the development of new modules. For example, there is a vast demand on environmental issues or civil protection in many regions. If you have good knowledge of Spanish and be interested in completing one of these modules (maybe for your electives within the UNIGIS studies or an additional training for professionals), feel free to contact the UNIGIS Salzburg office, to

check your possibilities.

Francesco Collivignarelli

Surface water mapping to
support humanitarian action:
a South Sudan case study

Looking back to UNIGIS

GI-Master Francesco recaps his achievement:

"Working as a remote sensing specialist, I've been using GIS on a daily basis for a long time. In late 2019, despite well mastering most of the tools related to this technology, I felt the need to learn more about their scientific background. In addition, my academic history stuck at the BSc in engineering, having entered the job market right after it. After a brief search, I came across the UNIGIS MSc."

GI_Salzburg - GetTogether

Ever wanted to visit Salzburg? That's your chance!

Although your UNIGIS studies may be online, we would be very pleased to say hello to you in Salzburg. Get to know your colleagues, the lecturers and professionals in real, at the GI_Salzburg.

We meet on Tuesday, July 5th at lunchtime on the terrace of the university, to hang out and chat with each other in a relaxed atmosphere.

New in our Team

There are new UNIGIS-Team members! Not only did Julia Moser give birth to a beautiful baby boy – Congratulations and we wish all the best with loads of happy moments! – but also joined Judith Grubinger-Preiner our team. Before she started to work at UNIGIS she studied Geography - Applied Geoinformatics and economics. Judith worked many years in the field of remote sensing, geo-marketing and data management. Now she is supporting the newcomers of the international studies and is lecturing the core module "Data Modelling and Data Structures". So if you need information, it could easily happen that it is Judith who answers you. But don't worry, she's just as sweet as all of us.
